

Ensuring our communities are safe and secure

Services:

- Security risk assessment
- Hostile vehicle mitigation and public spaces
- Crime prevention through environmental design
- Security operations analysis
- Risk minimisation
- Control room design
- Physical, electronic, and operational security
- CCTV cameras in public spaces
- SCEC endorsed works (PSPF/DSPF)

Helping you protect what's important

At Stantec, we're nimble. We understand that the world is filled with ever-evolving challenges and risks that must be abated or eradicated to keep our most valuable assets, our people and property, safe. Our security team are structured to adapt to our clients needs, and deliver our services as best suits them.

For some, this may come in the form of direct physical threats, requiring the need for advice and prevention measures. For others, this may be a more passive threat, requiring a deterrent or a mitigation in the form of a security system. We don't adhere to a rigid "one-size-fits-all" mentality, because we recognise that agility is key in helping our clients overcome obstacles and have confidence in the measures they utilise to keep safe.

Protecting our communities

Our Physical Security team has completed hundreds of consulting, design, engineering, and management projects locally, across Australia, and internationally.

Our service offering for physical security, combines security assessment with physical deterrents, staff readiness, and more. Our team will assess your project, and provide a range of strategic advice and tailored solutions to respond to your direct needs.

Designing smart, adaptable systems

We design smart systems that address the broad range of security situations our clients confront. These include:

- Stand-alone or integrated systems for identity management
- Access control
- Digital video surveillance
- Intrusion detection
- Information security
- Visitor management
- Fire life safety systems

For high security operations, we're adept at:

- Designing distributed networks
- The convergence of physical, electronic, and information security
- The functional integration of systems that allow devices from multiple vendors to communicate with each other over disparate infrastructure.

Holistic approach

Whether tasked to design new systems or upgrade existing processes, Stantec works with clients to holistically identify their requirements by understanding the facility's typical use and occupant lifestyles. The resulting design is a tailored and cost-effective system.

Impartial outlooks

Team members are completely independent from any manufacturer, integrator, supplier, vendor, or reseller of security systems or equipment. We're unbiased, and we give the best advice available to our clients based on their needs. Our prime objective is to offer security and consulting services with guaranteed impartiality in our findings, analyses, conclusions, and recommendations.

Working together

Communities are fundamental. Whether around the corner or across the globe, they provide a foundation, a sense of place and of belonging. That's why at Stantec, we always **design with community in mind**.

We care about the communities we serve—because they're our communities too. We're designers, engineers, scientists, and project managers, innovating together at the intersection of community, creativity, and client relationships. Balancing these priorities results in projects that advance the quality of life in communities across the globe. Stantec trades on the TSX and the NYSE under the symbol STN.
